

Babadul
INGO MAURER UND TEAM 2017

Paper, metal, stainless steel, silicone. Babadul is both a floor lamp and a light object, which emanates positively and unmistakably on spaces. The paper sheet hovers at the end of a slender metal rod, like a large abstracted flower petal. Just as in all other MaMo Nouchies, the lampshade consists of Japanese paper, which has to undergo a special manufacturing process in Dagmar Mombach's studio, until the desired shape is achieved. The light source is an LED module, provided with a cooling element, developed by Ingo Maurer especially for the MaMa Nouchies. Its light is so warm and soft, that any difference can hardly be noticed when compared to conventional halogen light sources.

Light source
LED 9 W, 970 lm, 2700 K, CRI>90, EEC F (A-G). With built-in LEDs. The light source is not exchangeable by the user, but by an electrician.

Technical data
For 100-240 volts. Dimmable. Photometric data on request.

More info
Available since winter 2017.
